DISPENSERS

95% SAVINGS ON CARBON EMISSIONS

The wall dispensers represent a great choice if you want to be more respectful with the environment, since there is less waste by reducing the use of materials, thus reducing the amount of CO₂.

All our wall dispensers have an ergonomic and sustainable dosing system that allows to obtain the correct dose by means of a pressure valve, minimizing the consumption at the time of supplying the product.

Our pressure valves, together with our exclusive supports, are designed to prevent sabotage, making it impossible to subtract the container and access the container, guaranteeing product safety, as it cannot be manipulated by third parties.

We have several models of dispensers with attractive designs, which will bring to your bathrooms a touch of sophistication and good taste, without leaving aside the functionality of them.

Each bottle of load of gel, shampoo or soap has its own batch number (according to European regulations), it cannot be filled through a bottle or refill, which would cause the traceability of the product to be lost, thus guaranteeing the quality and safety of the product not to be manipulated by third parties.
